Grower Name: \_\_\_\_\_ Date: \_\_\_\_\_ Hybrid: \_\_\_\_\_

Row width: (based on spacing of the planter row units, this should be the same as listed on entry.)

Row spacing between planter row units = \_\_\_\_\_ inches ÷ 12 = \_\_\_\_\_ feet of row width

\*Row length in feet: Record each pass through the field separately. **Record all calculations to four decimal places.**

\*Ref: Harvest Rules, pg. 11, Measuring

1.2500 harvested in one continuous pass: \_\_\_\_\_ X \_\_\_\_\_ ft = \_\_\_\_\_ ft  
# of rows harvested with header pass                      Row length                      Total row length one

Multiple passes to harvest 1.2500 minimum: A set of rows shall be harvested, then three times that number skipped, another set harvested and three times that number skipped and so on until 1.2500 or more acres have been harvested.

Example of multiple passes: Six-row harvester: Harvest six rows – skip eighteen – harvest six – skip eighteen – repeat as needed.
