

Outreach & Research Network

## Who We Are

The Corn Outreach & Research Network (CORN) is a collaborative, multi-state partnership of university Extension specialists, agronomists, and researchers dedicated to advancing corn production through science-based agronomic solutions. Our mission is to deliver research-driven information that empowers farmers, consultants, and agribusinesses to make informed decisions for productive, sustainable, and profitable corn production systems.

By aligning research and extension efforts across state lines, we address nationally relevant challenges and critical priorities in corn agronomy – ranging from nutrient and pest management to emerging technologies and cropping systems. Together, we strengthen the impact of research and extension programming and elevate the success of corn producers across the U.S.

Peter Kovacs ..... South Dakota State University  
Jake McNeal ..... University of Tennessee  
Harkirat Kaur ..... University of Wisconsin

## Coordinated Research Efforts

We implement unified research protocols across diverse regions to address pressing corn production challenges, accelerating the delivery of innovative, actionable solutions to the field.

## Leveraging Regional Expertise

Our team brings decades of applied research and extension experience from across the corn growing areas throughout the U.S. We translate local insights into nationally relevant strategies that resonate with producers and stakeholders.

## Amplifying Impact Through Extension

From field days and fact sheets to webinars and digital outreach, we provide accessible, practical tools grounded in current science. We collaborate with commodity groups and national checkoff programs to ensure timely, high-impact delivery of best management practices.

The Corn Outreach & Research Network is supported by the National Corn Growers Association and State Commodity Organizations.
