

MYCOTOXIN MITIGATION CENTER OF EXCELLENCE (MMCOE) STRUCTURE

NCGA leads the Center of Excellence’s direction and efforts through staff coordination and partnership with participating states and industry. This includes advocating for appropriations, organizing committees and grower participation, initiating the RFP process, interfacing with the USDA-ARS and industry stakeholders, and ensuring continuation of programming **focused on corn production**.

Each grower led committee will abide by governing structure (grower board, research advisory board, partner organizations) as outlined in their respective bylaws.
